

Steps for Using the GX and GS-24 (Big Vinyl Cutter)

1. OPEN your file. **Move your graphic(s) to the BOTTOM LEFT corner** of the screen. RESIZE, COPY/PASTE if needed. **If you have multiple graphics, line them up ALONG THE BOTTOM of the screen** moving from left to right.
2. **Use Rolls or scrap pieces** of vinyl. Place roll on rollers behind the machine. Feed through the machine and **line up edges of roll or piece with the rollers**. Rollers are **movable and should be in the “white zones.”**
3. *Front edge of vinyl roll should not go past the “sensor” (orange line).*
4. Move the **PINK LEVER UP** (which pushes the rollers down onto the vinyl).
5. **Press enter** to move cutter to right. Once all the way right, **push enter again** to move the cutter into position (*it will move all the way left*)
6. Click **“CUTTING.”** Then click **“OK.”**
